

MOTOR VEHICLE FIXED WINDOW REMOVAL SYSTEM

ABSTRACT

The invention is a quick-remove window system that provides for the rapid removal of a window from a motor vehicle. The system includes a motor vehicle window frame, a window disposed in the motor vehicle window frame, a window packing disposed between the window and the window frame, and a cord disposed in the window packing such that when the cord is moved a known length, an amount of the window packing is removed for facilitating removal of the window from the window frame.
